PROFESSIONAL SUMMARY

AI/ML Engineer and Data Scientist with **3 years of hands-on experience** building Python-based machine learning and Generative AI solutions across data processing, model development, evaluation, automation, RAG, and agentic workflows. Experience developing production-oriented ML systems, ranking and matching solutions, REST API applications, vector retrieval pipelines, and AI agents with modular architectures. Strong foundation in Python, SQL, ML/DL, LLM applications, backend development, data pipelines, and model evaluation.

TECHNICAL SKILLS

Programming & Backend: Python (Advanced), SQL; Data Structures & Algorithms, OOP, REST APIs, Flask, API Integration, Error Handling, Debugging, Modular Design

Machine Learning & Deep Learning: Scikit-learn, TensorFlow, Keras, PyTorch, Classification, Regression, Recommendation Systems, Ranking & Matching, Feature Engineering, Hyperparameter Tuning, Model Evaluation, Model Optimization, AUC-ROC, F1, Precision, Recall

Generative AI & NLP: LLMs, RAG, Embeddings, Semantic Search, Vector Databases, Retrieval Pipelines, Prompt Engineering, Agentic AI, ReAct Agents, LangChain, Hugging Face Transformers, LLM Fine-Tuning, NLP

Data & Analytics: Pandas, NumPy, Data Processing, Data Preprocessing, EDA, Statistical Analysis, Data Visualization, Power BI, MySQL

Development & Tools: Docker, Git, GitHub, Jupyter, VS Code, Google Colab, Hugging Face Spaces

Technologies Studied: AWS, Azure, GCP, S3, EC2, ALB, Terraform, Jenkins, Kafka, Snowflake, PostgreSQL, Qdrant, Supabase

Additional Technologies Studied: AngularJS, Spring Boot, HTML, CSS, JavaScript

PROFESSIONAL EXPERIENCE

Data Scientist (ML/Software) – Wipro Technologies — Sep 2024 – Present

Karnataka, India

- Developed an employee rotation matching system for an 18-month workforce rotation programme; built modular Python components for data ingestion, preprocessing, model training, evaluation, and result generation.
- Applied ranking logic to match employees with quarterly job profiles using skills, experience, and client history, translating a workforce allocation problem into a repeatable ML workflow.
- Automated monitoring and maintenance of Power BI dashboards by evaluating each dashboard against its configured refresh frequency, identifying dashboards that failed to refresh as expected, and triggering email notifications to the respective track leads.
- Built the monitoring workflow to reduce manual dashboard checks and provide timely escalation of refresh failures, improving operational visibility and reliability of business reporting.
- Developed an end-to-end Python data processing and analysis pipeline for structured team travel data and automated reporting with Power BI integration.
- Processed large structured datasets with Python, Pandas, and NumPy; developed reusable preprocessing and feature-engineering components and debugged data/model pipeline issues.
- Collaborated with cross-functional teams through solution design and code reviews, focusing on accuracy, modularity, testability, efficiency, and maintainable implementation.

Junior Data Scientist Intern – Innomatics Research Labs — Jan 2024 – Jun 2024

Remote

- Selected through a competitive 6-hour hackathon screening among 500+ participants; received a full-time offer after completing the internship.
- Developed Python data-collection pipelines using BeautifulSoup and Requests; cleaned, normalized, and structured data for downstream ML training.
- Built, evaluated, and debugged classification and regression models; analyzed model errors and iterated on features and hyperparameters to improve performance.

Operations Representative – Concentrix (Synnex Corporation) **May 2023 – Nov 2023**

Bengaluru, India

- Managed 500+ monthly content-review cases with 98% decision accuracy, maintaining data integrity and policy compliance at scale.

ML PROJECTS

AI Insurance Claims Processing Agent – Agentic AI System *Personal Project | Deployed on Hugging Face Spaces*

- Engineered a multi-step ReAct agent in Python with LangChain and Groq (LLaMA 3) for document parsing, structured extraction, rule-based fraud risk scoring, and automated APPROVE / ESCALATE / REJECT decisions.
- Designed a modular tool-based architecture to improve debuggability, extensibility, and separation of processing steps.

Healthcare Decision Support System – RAG Pipeline *Great Learning | University of Texas at Austin*

- Architected an end-to-end RAG pipeline covering text chunking, cleaning, normalization, vector embeddings, semantic retrieval, and domain-specific question answering.
- Used Hugging Face Transformers for LLM work and developed evaluation measures to assess response quality and pipeline performance.

Retail Sales Forecasting – ShareKart *Great Learning | University of Texas at Austin | GitHub*

- Built and evaluated regression and deep-learning approaches for product-level sales forecasting across locations, including data processing, feature engineering, and model evaluation pipelines.

Safety Helmet Detection – Computer Vision *Great Learning | University of Texas at Austin*

- Developed and optimized a CNN image classifier with TensorFlow and Keras; applied transfer learning, data augmentation, and systematic evaluation across varied lighting conditions.

Predictive Maintenance – Wind Turbine Failure Detection *Great Learning | University of Texas at Austin*

- Built classification models on sensor datasets and optimized decision thresholds using AUC-ROC analysis to reduce false negatives in failure prediction.

EDUCATION & CREDENTIALS

Master of Applied AI (Global) – Deakin University, Australia **Expected: September 2027**

Online Programme | Ongoing

Post Graduate Certificate in Artificial Intelligence & Machine Learning (PGP-AIML) Completed June 2026

Great Learning *Certificate: Great Lakes Institute of Management*

Certificate & Transcript: University of Texas at Austin

Bachelor of Technology in Computer Science – Amrita Vishwa Vidyapeetham, Kerala 2018 – 2022

ACHIEVEMENTS

- **Rank 16 – FutureTech AI Challenge:** Top-16 finish in a competitive ML challenge applying predictive analytics to real-world business problems under time constraints (Oct 2024).
- **Competitive Internship Selection:** Selected for Innomatics Research Labs through a 6-hour hackathon among 500+ candidates; received a full-time offer after completion.
